Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
This sequence has been finished according to sequence map criteria
as follows. An attempt is made to resolve all sequencing problems,
such as compressions and repeats, but not necessarily within known
                                                                                                                                                                                                              HSA218J18 119945 bp DNA PRI 23-NOV-1999 HSA218J18 IN Sequence from clone 218J18 on chromosome Xp11.3-11.4. Contains the NDP (Norrie Disease (Pseudoglioma)) gene and a CC1.3 Splicing Factor pseudogene. Contains ESTs, STSs and GSSs, complete
                                                                                                 Submitted (26-NOV-1998) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone

This sequence was generated from part of bacterial clone contigs of human chromosome X, constructed by the Sanger Centre Chromosome X Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/ChrX 218J18 is from the library RPCIG constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. IMPORPANT: This sequence is not the entire insert of clone 218J18.

It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /note="MSTD repeat: matches 1. 9767. .9798

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NOTE: This record contains 79 individual sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     overlap relationships among clones to be deduced. However, it should not be assumed that this clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           will be sequenced to completion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Web site: http://www-seq.wi.mit.edu

MAPPED CLONE OVERLAP: pDJ59mi8 and 6-109h6.

IMPORTANT: This submission contains the entire insert of clone pDJ1082L12. pDJ1082L12 comes from a PAC library constructed atthe pDJ1082L12 comes from a PAC library constructed atthe clone has been finished according to strict quality criteria and attempts have been made to resolve all base calling problems such as compressions and repetitive elements. The expected Phred/Phrap calculated errors/10kb is 0.39. In addition, this sequence has been finished such that 99.9% of consensus base calls consist of either double-stranded coverage or 2 types of labeling chemistry c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NOTE: Extent of pDJ1082L12 overlap with mapped clones; SP6 PAC cloning end: 1. 8775, pDJ59ml8; T7 PAC cloning end: 45252. .115958 6-109h6. Further information regarding the map of this region or annotation of pDJ1082L12 can be found at http://gestec.swmed.edu/chromoso2.htm. CHROMSOMAL LOCUS: This PAC clone comes from the Usher syndrome region (USH1C) mapped between STSs markers DJ1S1310 and 1115A14. MARKER CONFIRMATION: STSS/ESTS sequence confirmed; D11S4130, KNCN1,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                4 (bases 1 to 115958)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             COMMENT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              JOURNAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.
                                                                                                                                                                                                                                                                                                                   Position

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are c sequenced and submitted once, so the sequence for the remainder the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Submitted (01-APR-1999) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA On Mar 30, 1999 this sequence version replaced gi:4263627.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, coagulation; to inhibit thrombosis; and as a contraceptive.

N.B. The cDNA and corresp. amino acid sequences for EAA3b, 3c and 3d do not appear in full in the specification; the sequences have been compiled by combining sequences in Figures 1 and 4 according to the description given in the disclosure.
                                                                                                                                                                                                                                                                                                                                                                                                                         The human EAA3a receptor (AAR60112) and its variants EAA3b, EAA3c and EAA3d (AAR63068-R63070) occur naturally in human brain. They are all members of the EAA3 receptor family, having extracellular N- and C-termini and 4 internal hydrophobic domains which anchor the receptor within the cell surface membrane. The receptors bind glutamate and also exhibit binding properties characteristic of kainate-type EAA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAX20446
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The sequence given represents the 5' non-coding region, all of the coding region and the 3' non-coding region of the tomato heat shock protein 80.5 (hsp80) genomic clone Ghsp-4(locus A). Tomato hsp80 is C characterised by having a mRNA of about 2.3 kb, two introns, a predicted pl of about 4.69 and a molecular weight of 80,479.8 daltons. The polypeptides encoded by tomato hsp80 have substantial homology with the polypeptides encoded by related heat shock proteins from a c variety of prokaryotic and eukaryotic species. There are two hsp80 genes in tomato, identified as locus A and locus B. The low copy number of the hsp80 gene is a useful indicator of the strength of the promoter. Tomato hsp80 message is found in abundance in most, if not all meristematic tissue eg, flower meristems, early fruit, and root and shoot apices. hsp80 message is detected in floral primordia of inmature fruit, where it increases until the fruit begins to swell. The mRNA levels observed in normal mature leaves is approx. 1/10th of the process of the level observed in meristematic tissue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                  This sequence represents a nucleic acid molecule which encodes a secreted human protein. The gene number is given in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fc portion (e.g. AAX20403) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 83 novel genes and their fragments (nucleic acid sequences: AAX20412-X20499; amino acid sequences AAX00258-Y00377) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polynucleotides. Specific uses are described for each of the 86 polynucleotides, based on which tissues they are most highly expressed in sea AAX70417 for described new in the new polynucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Carter

                                                                                                                                                                                                                                                                cells. Membrane proteins have important roles as signal receptors, ion channels and transporters. The present sequence is the coding sequence for a human protein which has at least one hydrophobic domain. The protein encoded by the present sequence may be a secretory or a membrane
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Proteins comprising hydrophobic regions, such as secretory and membrane proteins, useful in research and diagnostics and having various activities e.g. immunomodulatory, antiinflammatory, chemokinetic,
                               activin/inhibin activity, chemotactic/chemokinetic activity, haemcand thrombolytic activity, anti-inflammatory activity and tumour inhibition activity. The present sequence could therefore be used treatment of autoimmune disease, Alzheimer's disease, Parkinson's
                                                                                                                                                                 protein. The encoded protein may have cytokine and cell proliferation/differentiation activity, immune stimulating or suppressing activity, haematopoiesis activity, tissue growth activity,
                                                                                                                                                                                                                                                                                                                                                                                                         Secretory proteins play important roles in the proliferation control, differentiation induction, the material transport and the biophylaxis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 3; Page 303; 410pp; English.

CC AABS1722 represent human secreted polypeptide sequences and proteins CC invention. Human secreted proteins have activities based on the tissues CC and cells the genes are expressed in Examples of activities include: CC antiarthritic; immunosuppressive; antirheumatic; antiproliferative; CC cytostatic; cardiant; vasotropic; cerebroprotective; notropic; creative; antibacterial; virucide; fungicide; and proteins mice of prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used CC pathological condition. Disorders which are diagnosed or treated include CC autoimmune diseases, hyperproliferative disorders, cardiovascular CC disorders, infections caused by bacteria, viruses and fungi and ocular CC disorders. The polypeptides can also be used to all wound healing and ce pithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of columentiaes can also he used as a food additive or preservative to
                                                                                                                                                                                                                                                                                                                                                                        increase or decrease storage AAB51619 represent sequences
                                                       polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. AAC93355 to AAC93363 and AAB51619 represent sequences which are used in the exemplification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The polynucleotide sequences given in AAC93364 to AAC93412 encode thuman secreted proteins given in AAB51620 to AAB51668.                   This sequence encodes human G-protein coupled receptor protein (GCRP) The GCRP polypeptides, polynucleotides, antibodies, antagonists and agonists may be administered to human patients for the diagnosis, treatment and prevention of nervous system disorders (e.g. epilepsy, stroke, neoplasms, Alzheimer's disease), autoimmune or inflammatory disorders, complications of cancer, hemadialysis and extracorporeal circulation, and cell proliferative disorders. They are also used to treat or prevent disorders associated with decreased or increased expression or activity of GCRP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 immunosuppressive; antiasthmatic; antianemic; antiarteriosclerotic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Best Local Similarity
                                     derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dr primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion
                                                                                                                                                                                The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. An ORF has been identified within the sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1661
                                                                                                                                                                                                                                                                        New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and fo diagnostic, forensic, gene therapy and chromosome mapping procedu

Novel Ret ligand polypeptide useful for suppressing growth of a tumor cell that expresses Ret and for modulating Ret signal transduction involving a cell expressing Ret polypeptide or Ret ligand polypeptide

Claim 1; Page 42-53; 76pp; English

The invention relates to mouse and human Ret ligand 5 (RetL5) polypeptides. The RetL5 polypeptides can be expressed by standard recombinant methodology. The RetL5 when bound to Ret, acts as a dimerization or autophosphorylation activator. The polypeptides and their antibodies are useful for stimulating growth of or limiting damage to, Ret expressing tissue in a subject, for suppressing growth of a tumour cell that expresses Ret, for modulating Ret signal transduction involving a cell expressing the Ret polypeptide. The RetL5 polypeptides, fusion proteins containing RetL5 and antibodies are useful for stimulating renal tissue growth and/or survival, supporting renal function and minimizing damage to renal tissue after various insults, particularly for treating acute renal failure, acute nephritis, chronic renal failure, nephrotic syndrome, renal tubule defects, kidney transplants, toxic injury, hypoxic injury and trauma. The compounds are also useful for treating conditions are also useful for treating conditions. such as neural degeneration where neural growth and regeneration are desirable, e.g., Alzheimer's disease, Parkinson's disease, Huntington's diseate, the desirable of the state of the sta tissue caused by neoplastic impingement, trauma or cerebrovascular events such as hemorrhage or emboli, and neural disorders such as mental retardation, autism, fetal alcohol syndrome, Down's syndrome and cerebral motor neuron disease, demyelinating disease, bacterial diseases, viral diseases, and prion diseases including Creutzfeldt-Jakob disease. The compounds are also useful for treating disorders due to damage to neural palsy. The present sequence genomic DNA sequence 0

                    DNA-B. It encodes a protein (see AAW34336) having a DNA binding site specific to the DNA-A common region, a DNA nicking activity, and an NTP binding activity. The invention involves production of transgenic plants containing DNA comprising AC1 or C1 wild-type or mutant sequences that negatively interfere in trans with
                                                                                                                                                                                                                                                                                                                                                                                Transgenic plants expressing geminivirus AC1 and C1 wild-type and mutant genes - have increased resistance to geminivirus infection e.g. tomato mottle virus, tomato yellow leaf curl virus or bean
                                                                                                                                                            that has a bipartite genome. The AC1 gene must be exefficient replication of the two genomic components,
                                                                                                                                                                                                                   wild-type AC1 gene
                                                                                                                                                                                                                                                This genomic DNA sequence includes the open reading frame
                                                                                                                                                                                                                                                                                                        Example 3.3;
                                                                                                                                                                                                                                                                                                                                                               golden mosaic geminivirus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ahlquist
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Tomato
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Tomato mottle virus AC1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          3527
